PIR REMOTE LED ENABLE

Function: *Enables the PIR LED during walk test mode, when the LED has been disabled by removing the LED link pin.*

Pyronix panels: *From user mode enter walk test mode. The PIR LED will be enabled. Walk test the PIR. When exiting walk test mode the PIR LED will be disabled again.*

Connection: Connect (LED) to a PGM at the control p anel programmed to be 0V when the system is in walk test mode.

AVOIDING FALSE ALARMS

1. Avoid placing the detector in direct sunlight.
2. Do not let pets and other animals wander freely whilst the alarm system is armed.
3. Do not mount the detector near heaters or radiators.
4. Do not mount the detector near open windows or air vent s as draughts may cause false alarms.
5. Mount the detector on a st able surface.
6. Do not run cable parallel t o mains wiring.

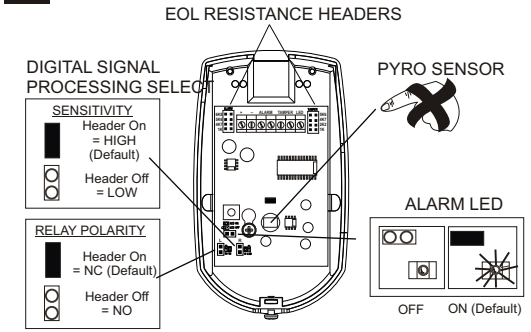
D PHYSICAL LAYOUT

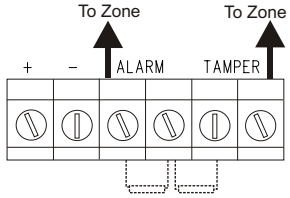


E EOL RESISTOR HEADERS

The KX15DD has two sets of header pins on the PCB, one on either side of the connector blocks. These headers are used to select the End Of Line resistance for EOL wiring applications. If EOL wiring is not used, leave the headers OFF.

The set to the left of the + terminal selects the value of the resistance across the ALARM relay. The set to the right of the TAMPER terminals selects the value of the End Of Line resistor.

If the resistance value you require is not selectable, leave the headers off and wire a resistor of the required value between the appropriate terminals as shown.



This symbol illustrates where the resistors are connected internally
